CaseWare**Audit**

Revolutionize the audit process and focus on the areas that matter.

CaseWare Cloud Audit provides a whole new way to manage the audit process. From associated communications and client requests, to risk assessment and value-added analytics, auditors can now move their focus to the right areas of each audit engagement. The result; audits are completed faster, providing higher quality results for the client and time saved on each audit performed.

Streamline work processes and centralize risk management

CaseWare Cloud Audit centralizes risk management and allows users to record a risk from anywhere in the engagement. Leveraging CPA Canada content, users can select from a predefined list of risks which can be tied back to the audit work to minimize the chance of overworking the file.

Improve audit quality, processes, communication and transparency

With CaseWare Cloud Audit, firms are empowered to streamline processes and collaborate in one location. Here, all communications are sent, received, and tracked. Not only does this streamline processes, it eliminates the need for multiple email threads and tools.

CASEWARE®

Key Features of CaseWare Cloud Audit

Intelligent Content

Using client data and responses to pre-set questions, online content is tailored to provide only what is relevant for the engagement at hand.

Materiality

Once set, materiality is documented and visible within the navigation panel. If an assessment is higher than materiality, a prompt appears to flag the financial statement area.
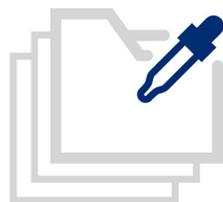

Analytical Procedures

Trial balance data is automatically analyzed and graphed, making it easy to visualize where risks may lie. For additional tools and insights, CaseWare AnalyticsAI can be activated.

Centralized Risk Management

New and existing risks can be added and updated at any time. Following this, a centralized summary page provides visual charts, and records and stores risk assessment notes.

Sampling of Transactions

Analyze general ledger data by sorting and filtering as well as calculating sample size. Sample selection can be done using the Manual, Random, Monetary Unit or Systematic methods.
